

### Discovery kit for STM32F7 Series with STM32F746NG MCU

## Introduction

The STM32F746G-DISCO discovery board (32F746GDISCOVERY) is a complete demonstration and development platform for STMicroelectronics ARM® Cortex®-M7 core-based STM32F746NGH6 microcontroller. This microcontroller features four I<sup>2</sup>Cs, six SPIs with three multiplexed simplex I<sup>2</sup>S, SDMMC, four USARTs, four UARTs, two CANs, three 12-bit ADCs, two 12-bit DACs, two SAIs, 8- to 14-bit digital camera module interface, internal 320+16+4 KB SRAM and 1 MB Flash memory, USB HS OTG, USB FS OTG, Ethernet MAC, FMC interface, Quad-SPI interface, SWD debugging support. This discovery board offers everything required for users to get started quickly and develop applications easily.

The full range of hardware features on the board helps to evaluate almost all peripherals (USB OTG HS, USB OTG FS, Ethernet 10/100Mb, MicroSD Card, USART, SAI Audio DAC stereo with audio jack input and output, MEMS digital microphones, SDRAM, Quad-SPI Flash memory, 4.3-inch color LCD-TFT with a capacitive multi-touch panel, SPDIF RCA input, etc.) and develop your own applications. Arduino Uno V3 connectors make it possible to easily connect extension shields or a daughterboard for your specific application. The integrated ST-LINK/V2-1 provides an embedded in-circuit debugger and programmer for the STM32 MCU.

The STM32F746G-DISCO board comes with the STM32 comprehensive software HAL library together with various packaged software examples, as well as a direct access to mbed online resources at <http://mbed.org>.

# 1 Features

- STM32F746NGH6 microcontroller featuring 1 Mbytes of Flash memory and 340 Kbytes of RAM, in BGA216 package
- On-board ST-LINK/V2-1 supporting USB reenumeration capability
- Mbed-enabled (mbed.org)
- USB functions: virtual COM port, mass storage, debug port
- 4.3-inch 480x272 color LCD-TFT with capacitive touch screen
- Camera connector
- SAI audio codec
- Audio line in and line out jack
- Stereo speaker outputs
- Two ST MEMS microphones
- SPDIF RCA input connector
- Two pushbuttons (user and reset)
- 128-Mbit Quad-SPI Flash memory
- 128-Mbit SDRAM (64 Mbits accessible)
- Connector for microSD card
- RF-EEPROM daughterboard connector
- USB OTG HS with Micro-AB connectors
- USB OTG FS with Micro-AB connectors
- Ethernet connector compliant with IEEE-802.3-2002
- Five power supply options:
  - ST LINK/V2-1
  - USB FS connector
  - USB HS connector
  - VIN from Arduino connector
  - External 5 V from connector
- Power supply output for external applications: 3.3 V or 5 V
- Arduino Uno V3 connectors
- Comprehensive free software including a variety of examples, part of STM32Cube package
- Supported by a wide choice of integrated development environments

# 2 Demonstration software

The demonstration software is preloaded in the STM32F746NGH6 Flash memory. The latest versions of the demonstration source code and associated documentation can be downloaded from [www.st.com/stm32f7-discovery](http://www.st.com/stm32f7-discovery).

### 3 Product marking

Evaluation tools marked as "ES" or "E" are not yet qualified and therefore they are not ready to be used as reference design or in production. Any consequences deriving from such usage will not be at ST charge. In no event, ST will be liable for any customer usage of these engineering sample tools as reference design or in production.

"E" or "ES" marking examples of location:

- On the targeted STM32 that is soldered on the board (for illustration of STM32 marking, refer to the section "Package characteristics" of the STM32 datasheet at [www.st.com](http://www.st.com)).
- Next to the evaluation tool ordering part number, that is stuck or silk-screen printed on the board.

### 4 Ordering information

To order the discovery kit with STM32F746NG MCU, use the order code: STM32F746G-DISCO.

### 5 Technology partners

**MICRON:**

- 128-Mbit SDRAM (64 Mbits accessible on the kit), part number MT48LC4M32B2
- 128-Mbit Quad-SPI NOR Flash memory device, part number N25Q128A

**ROCKTECH:**

- Color display, 4.3-inch LCD-TFT (resolution: 480x272), capacitive touch, part number RK043FN48H-CT672B

## 6 Hardware layout and configuration

STM32F746G-DISCO discovery board is designed around the STM32F746NGH6 (216-pin TFBGA package). The hardware block diagram (see [Figure 3](#)) illustrates the connection between STM32F746NGH6 and peripherals (SDRAM, Quad-SPI Flash memory, camera module, color LCD, USB OTG connectors, USART, Ethernet, Audio, SPDIFRX, MicroSD card, Arduino Uno shields and embedded ST-LINK) and [Figure 3](#) will help to locate these features on the actual discovery board.

**Figure 3. Hardware block diagram**

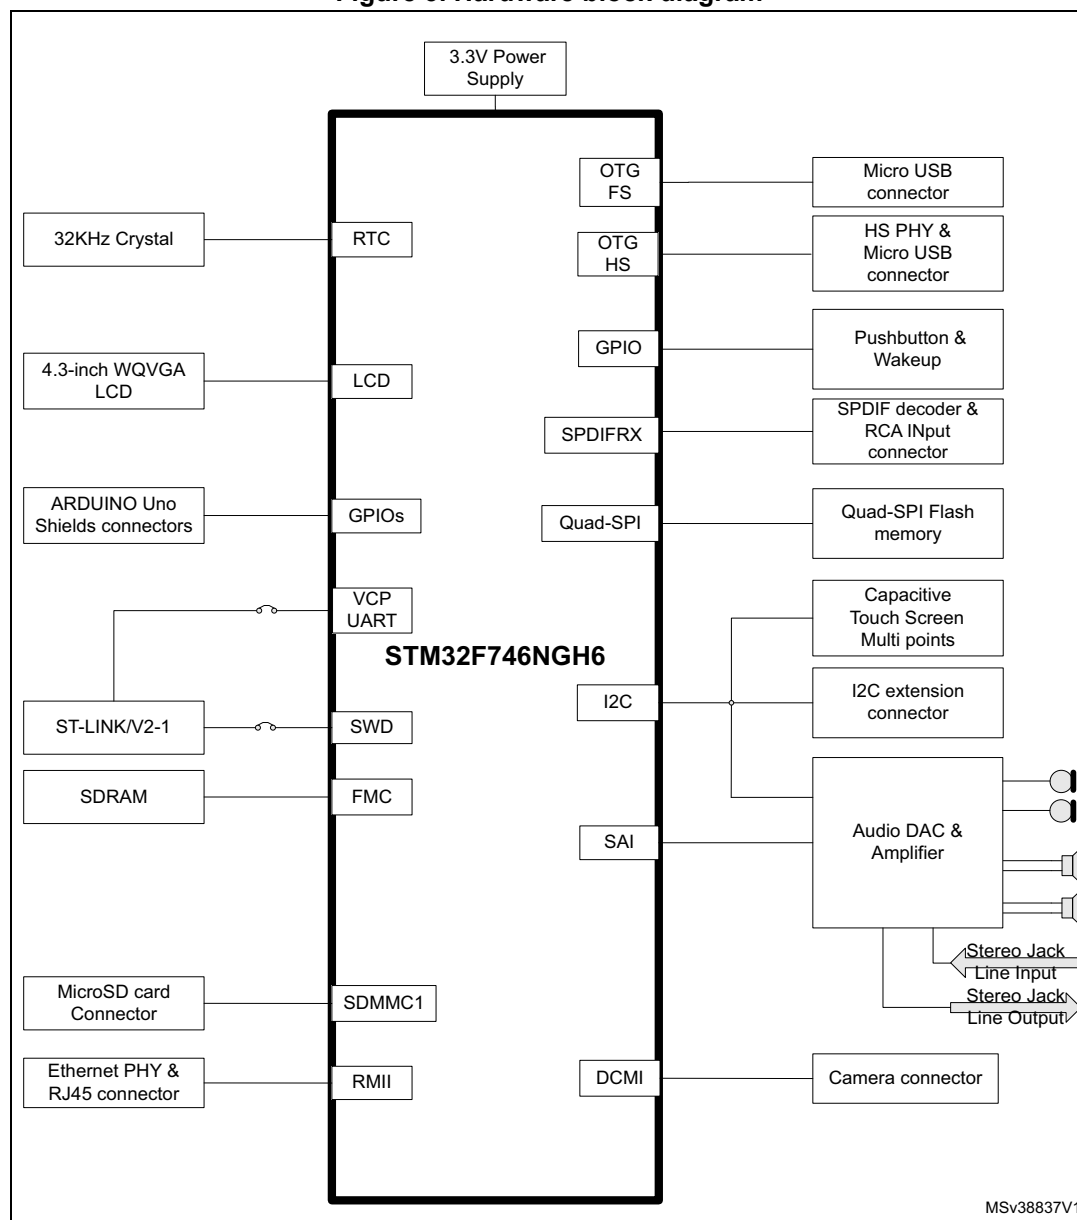

Figure 4. STM32F746G-DISCO discovery board top layout

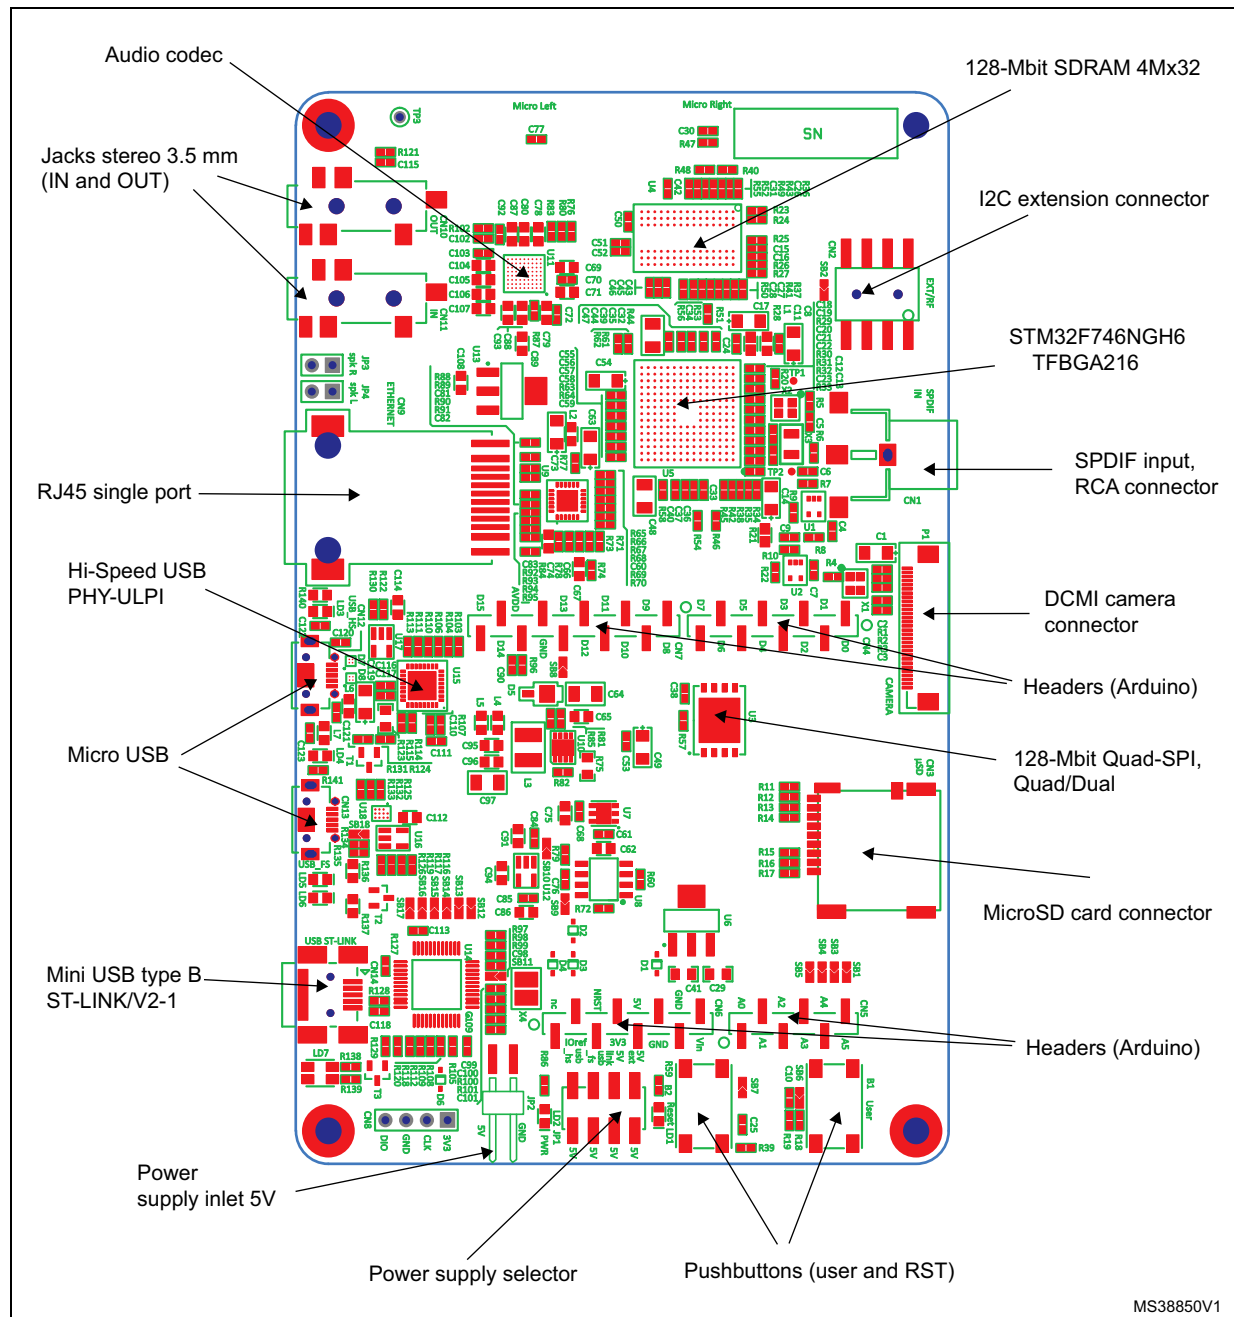

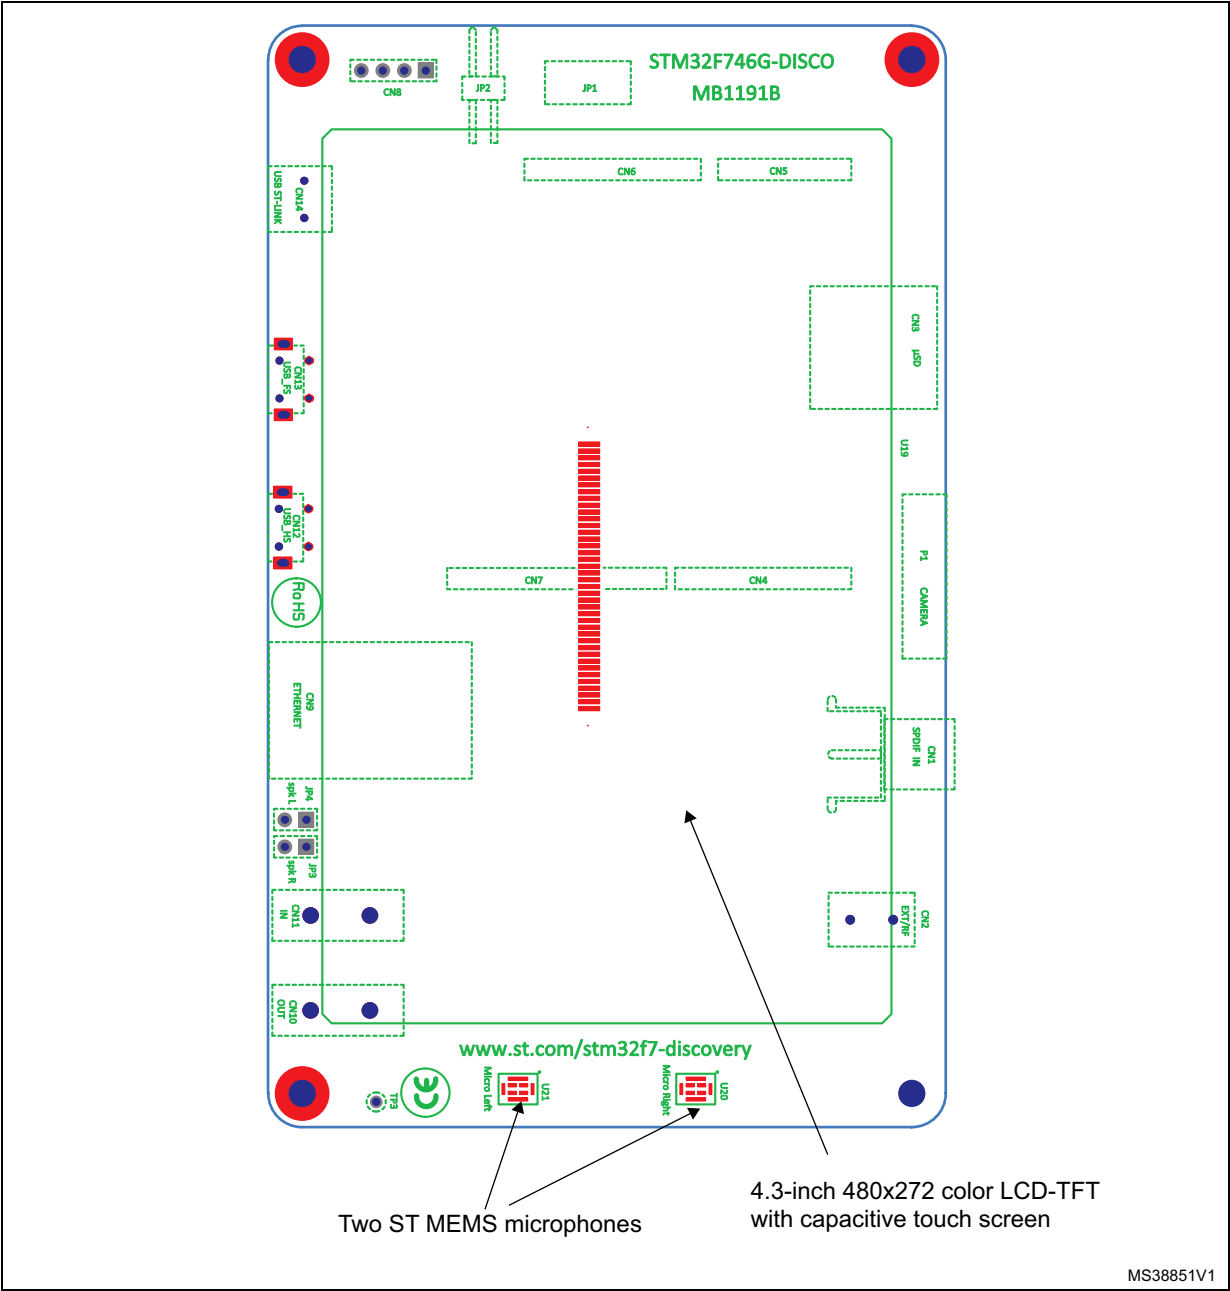

Figure 5. STM32F746G-DISCO discovery board bottom layout

## 6.1 Embedded ST-LINK/V2-1

The ST-LINK/V2-1 programming and debugging tool is integrated on the STM32F746G-DISCO discovery board. Compared to ST-LINK/V2 the changes are listed below.

The new features supported on ST-LINK/V2-1 are:

- USB software re-enumeration
- Virtual Com port interface on USB
- Mass storage interface on USB
- USB power management request for more than 100mA power on USB

These features are no more supported on ST-LINK/V2-1:

- SWIM interface
- Application voltage lower than 3 V

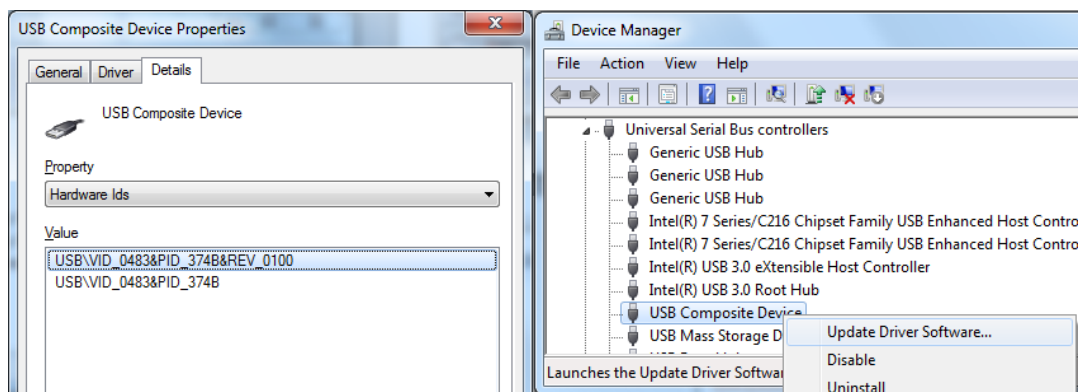

For all general information concerning debugging and programming features common between V2 and V2-1 please refer to ST-LINK/V2 user manual (UM1075).

### 6.1.1 Drivers

The ST-LINK/V2-1 requires a dedicated USB driver, which, for Windows XP, 7 and 8, can be found at [www.st.com](http://www.st.com).

In case the STM32F746G-DISCO discovery board is connected to the PC before the driver is installed, some STM32F746G-DISCO interfaces may be declared as “unknown” in the PC device manager. In this case the user must install the driver files, and update the driver of the connected device from the device manager.

*Note:* Prefer using the “USB Composite Device” handle for a full recovery.

### 6.1.2 ST-LINK/V2-1 firmware upgrade

The ST-LINK/V2-1 embeds a firmware upgrade mechanism for in-situ upgrade through the USB port. As the firmware may evolve during the life time of the ST-LINK/V2-1 product (for example new functionality, bug fixes, support for new microcontroller families), it is recommended to visit [www.st.com](http://www.st.com) before starting to use the STM32F746G-DISCO board and periodically, in order to stay up-to-date with the latest firmware version.

## 6.2 Power supply

STM32F746G-DISCO discovery board is designed to be powered by 5V DC power supply. It's possible to configure the discovery board to use any of the following five sources for the power supply.

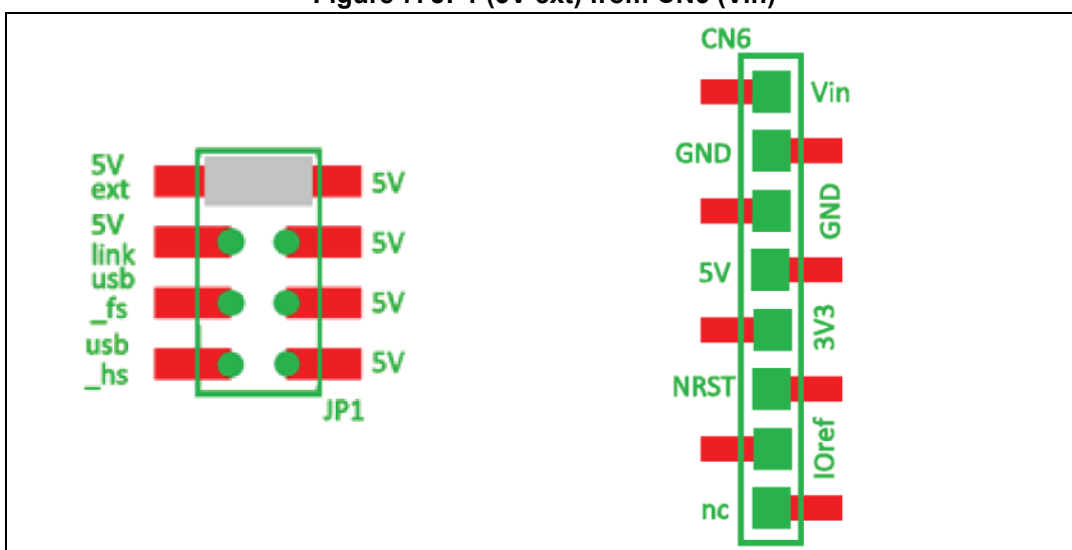

- 5V DC power adapter connected to JP2 (external power supply on silkscreen of JP1 (5V ext)). In this case, the STM32F746G-DISCO discovery board must be powered by a power supply unit or by an auxiliary equipment complying with standard EN-60950-1: 2006+A11/2009, and must be Safety Extra Low Voltage (SELV) with limited power capability.

Figure 6. JP1 (5V ext) from JP2 (5V)

- 7-12V DC power from CN6 pin named Vin on silkscreen, the extension connectors for Arduino UNO shields or daughterboard (external power source on silkscreen of JP1 (5V ext)).

Figure 7. JP1 (5V ext) from CN6 (Vin)

- 5V DC power with limitation from CN14, the USB type mini-B connector of ST-LINK/V2-1 (USB 5V power source on silkscreen of JP1 (5V link)). It is the default setting. If the USB enumeration succeeds (as explained below), the ST-LINK 5V link power is enabled, by asserting the PWR\_ENn signal. This pin is connected to a power switch (ST890), which powers the board. This power switch features also a current limitation to protect the PC in case of a short-circuit on board (more than 600mA).

STM32F746G-DISCO discovery board can be powered from ST-LINK USB connector CN14 (5V link), but only ST-LINK circuit has the power before USB enumeration, because the host PC only provides 100mA to the board at that time. During the USB enumeration, STM32F746G-DISCO board asks for the 500mA power to the host PC. If the host is able to provide the required power, the enumeration finishes by a “SetConfiguration” command and then, the power transistor U8 (ST890) is switched ON, the red LED LD2 is turned ON, thus STM32F746G-DISCO board can consume maximum 500mA current, but no more. If the host is not able to provide the requested current, the enumeration fails. Therefore the ST890 (U8) remains OFF and the MCU part including the extension board won't be powered. As a consequence the red LED LD2 remains turned OFF. In this case it is mandatory to use an external power supply.

Figure 8. JP1 (5V link)

**Note:** In case the board is powered by an USB charger, there is no USB enumeration, so the led LD2 remains set to OFF permanently and the board is not powered. Only in this specific case, the resistor R109 needs to be soldered, to allow the board to be powered anyway.

The LED LD2 is lit when the STM32F746G-DISCO discovery board is powered by the 5V correctly.

**Caution:** Do not connect PC to ST-LINK (CN14) when R109 is soldered. PC may be damaged or the board not powered correctly.

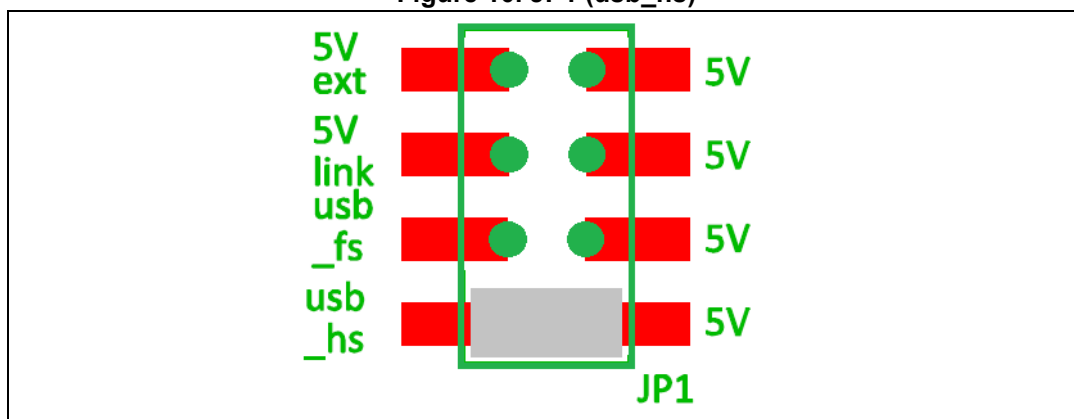

- 5V DC power with 500mA limitation from CN13, the USB OTG FS micro-AB connector (USB 5V power source on silkscreen of JP1 (usb\_fs)).

Figure 9. JP1 (usb\_fs)

- 5V DC power with 500mA limitation from CN12, the USB OTG HS micro-AB connector (USB 5V power source on silkscreen of JP1 (usb\_hs)).

Figure 10. JP1 (usb\_hs)

### 6.3 Programing/debugging when the power supply is not from ST-LINK (5V link)

It is mandatory to power the board first using JP1 (5V ext) or (usb\_hs) or (usb\_fs), then connecting the USB cable to the PC. Proceeding this way ensures that the enumeration succeeds thanks to the external power source.

The following power sequence procedure must be respected:

1. Connect the jumper JP1 on (5V ext) or (usb\_hs) or (usb\_fs)
2. Connect the external power source to JP2 or CN6 or CN12 or CN13
3. Check the red LED LD2 is turned ON
4. Connect the PC to USB connector CN14

If this order is not respected, the board may be powered by VBUS first from ST-LINK, and the following risks may be encountered:

1. If more than 500mA current is needed by the board, the PC may be damaged or current can be limited by PC. As a consequence the board is not powered correctly.
2. 500mA will be requested at the enumeration, so there is a risk that the request is rejected and enumeration does not succeed if PC can't provide such current.

## 6.4 Clock sources

Up to 3 clock sources as described below:

- X1, 24MHz oscillator for USB OTG HS PHY and camera module (daughterboard)
- X2, 25MHz oscillator for STM32F746NGH6 microcontroller and Ethernet PHY.
- X3, 32KHz crystal for STM32F746NGH6 embedded RTC

## 6.5 Reset sources

The reset signal of STM32F746G-DISCO discovery board is active low and the reset sources include:

- Reset button B2
- Arduino Uno shield board from CN6
- Embedded ST-LINK/V2-1

## 6.6 Audio

An audio codec WM8994ECS/R from CIRRUS with 4 DACs & 2ADCs is connected to SAI interface of STM32F746NGH6. It communicates with STM32F746NGH6 via I2C bus shared with the camera module and I2C extension connector.

- The analog line input is connected to ADC of WM8994ECS/R through blue audio jack CN11.
- The analog line output is connected to DAC of WM8994ECS/R via green audio jack CN10.
- Two external speakers can be connected to WM8994ECS/R via JP3 for right speaker and JP4 for left speaker.
- Two digital microphones (ST MEMs microphone) MP34DT01TR are on STM32F746G-DISCO discovery board. They are connected to the input digital microphones of WM8994ECS/R.
- One coaxial connector CN1 is implemented on STM32F746G-DISCO to receive external audio data compatible with SPDIF specification.

## 6.7 USB OTG FS

STM32F746G-DISCO discovery board supports USB OTG full speed communication via a USB micro-AB connector (CN13) and USB power switch (U6) connected to VBUS. The discovery board can be powered by this USB connection at 5V DC with 500mA current limitation.

A green LED LD5 will be lit in one of these cases:

- Power switch (U6) is ON and STM32F746G-DISCO works as an USB host
- VBUS is powered by another USB host when STM32F746G-DISCO works as an USB device.

The red LED LD6 will be lit when an over-current occurs.

*Note: STM32F746G-DISCO board should be powered by external power supply when using OTG function.*

## 6.8 USB OTG HS

STM32F746G-DISCO discovery board supports USB OTG high speed communication via an USB micro-AB connector (CN12), USB high speed PHY (U15) USB3320C-EZK from MICROCHIP for high speed function.

The discovery board can be powered by the USB connectors (CN12) at 5V DC with 500mA current limitation.

An USB power switch (U7) is also connected on VBUS and provides power to CN12.

The green LED LD4 will be lit when either:

- Power switch (U17) is ON and STM32F746G-DISCO works as an USB host
- VBUS is powered by another USB host when STM32F746G-DISCO works as an USB device.

The red LED LD3 will be lit when an over-current occurs.

*Note: STM32F746G-DISCO board should be powered by external power supply when using OTG function.*

## 6.9 MicroSD card

The 2GB (or more) MicroSD card connected to SDMMC1 port of STM32F746NGH6 is supported by the board.

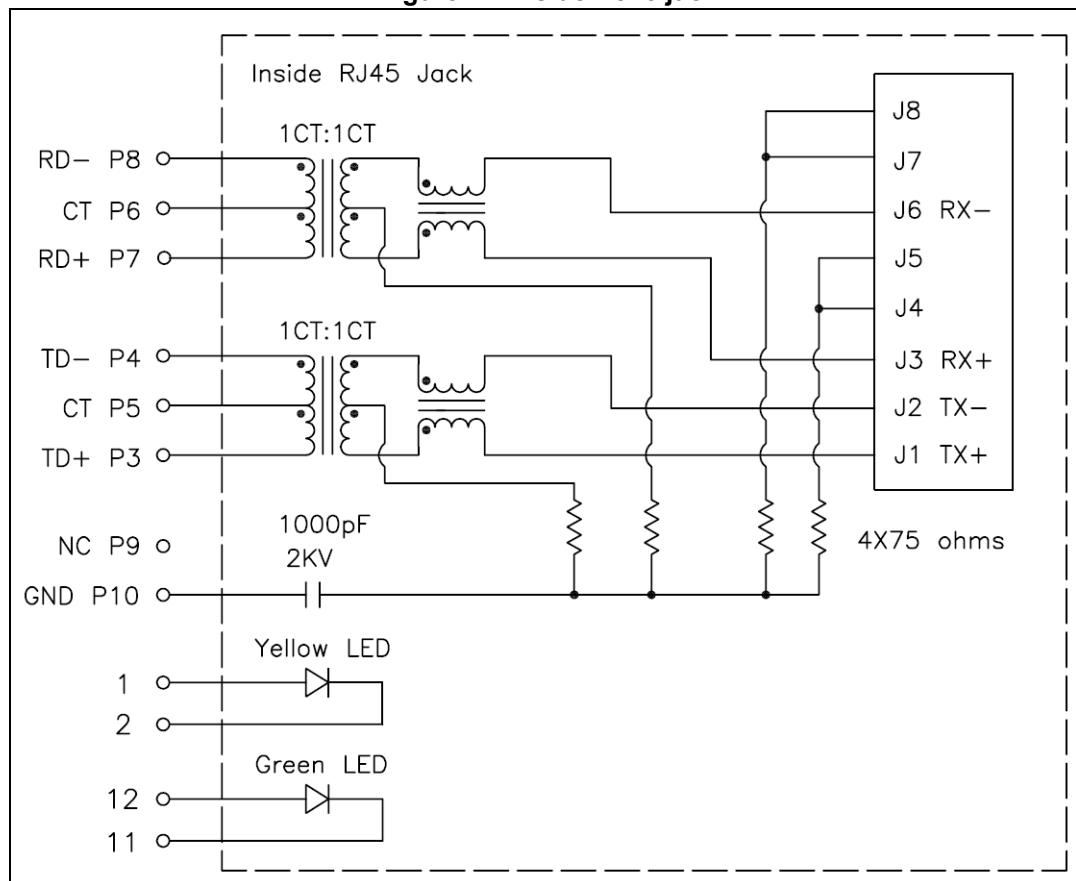

## 6.10 Ethernet

STM32F746G-DISCO discovery board supports 10M/100M Ethernet communication by a PHY LAN8742A-CZ-TR (U9) from MICROCHIP and integrated RJ45 connector (CN9). Ethernet PHY is connected to STM32F746NGH6 via RMII interface.

25 MHz clock for the PHY is generated by the oscillator X2, the 50 MHz clock for the STM32F746NGH6 is generated by the PHY RMII\_REF\_CLK.

**Figure 11. Inside RJ45 jack**

## 6.11 SDRAM memory

128-Mbit SDRAM (MT48LC4M32B2B5-6A from MICRON) is connected to FMC interface of STM32F746NGH6. Only lower 16bits data are used (64-Mbits accessible). DQ16 to DQ31 are unused and connected to a 10K ohm pull-down resistor.

## 6.12 Quad-SPI Nor Flash memory

128-Mbit Quad-SPI Nor Flash memory (N25Q128A13EF840E from MICRON) is connected to Quad-SPI interface of STM32F746NGH6.

## 6.13 Camera module

A connector P1 with the DCMI signals is available to connect a camera module such as STM32F4DIS-CAM (ST order code).

## 6.14 Display LCD-TFT

The color display from ROCKTECH, 4.3-inch 480x272 LCD-TFT with capacitive touch panel is connected to RGB LCD interface of STM32F746NGH6.

# 7 Connectors

## 7.1 I2C extension connector CN2

### 7.3 Arduino Uno revision 3 connectors

CN4, CN5, CN6 and CN7 are female connectors compatible with Arduino standard. Most shields designed for Arduino can fit to the STM32F746G-DISCO discovery board.

The Arduino connectors on STM32F746G-DISCO discovery board support the Arduino Uno revision 3.

**Caution:** The IOs of STM32 microcontroller are 3.3 V compatible instead of 5 V for Arduino Uno.

Table 3. Arduino connectors (CN4, CN5, CN6, CN7)

Left connectors					-	Right connectors

## 7.9 Audio stereo speakers JP3 and JP4

The stereo audio outputs JP3 and JP4 are available to support stereo speakers (left and right)

## 7.10 Audio green jack (line Out) CN10

A 3.5mm stereo audio green jack output CN10 is available to support the headphone.

## 7.11 Audio blue jack (line In) CN11

A 3.5mm stereo audio blue jack input CN11 is available to support the audio line input.

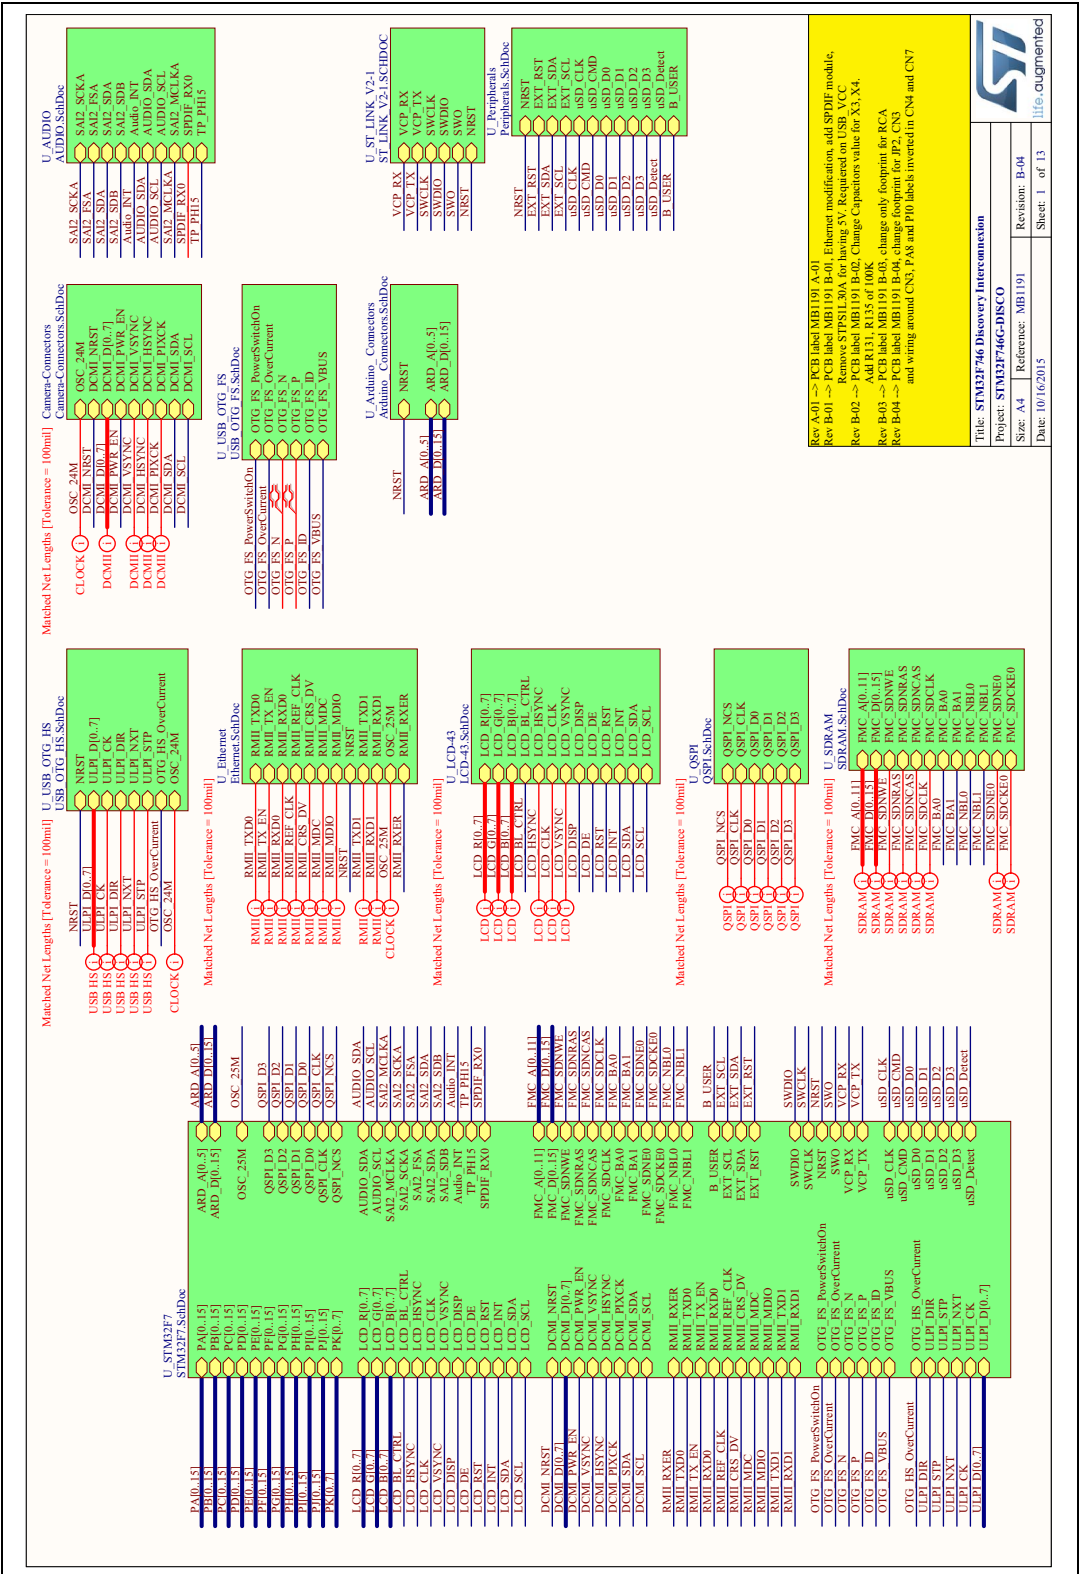

## 7.12 SPDIF input RCA connector CN1

R9	PE10	FMC_D7_DA7	-

1. By default OTG\_FS\_VBUS is driven by software and not by the alternate function of the STM32F746NGH6 (R64 = ON, R63 = OFF, R58 = ON and PA9 = VCP\_TX (Virtual Com Port) and PJ12 = OTG\_FS\_VBUS).

To use the alternate function OTG\_FS\_VBUS of the STM32F746NGH6, it's needed to have: R64 = OFF, R63 = ON, R58 = OFF. In that configuration, VCP\_TX is no longer available and PA9 = OTG\_FS\_VBUS, PJ12 = not connected.

Appendix B Mechanical drawing

Figure 32. Mechanical drawing

## **Appendix C     Federal Communications Commission (FCC) and Industry Canada (IC) Compliance**

### **C.1        FCC Compliance Statement**

#### **C.1.1      Part 15.19**

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

#### **C.1.2      Part 15.105**

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and the receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help..

#### **C.1.3      Part 15.21**

Any changes or modifications to this equipment not expressly approved by STMicroelectronics may cause harmful interference and void the user's authority to operate this equipment.

### **C.2        IC Compliance Statement**

#### **C.2.1      Compliance Statement**

Industry Canada ICES-003 Compliance Label: *CAN ICES-3 (B)/NMB-3(B)*

#### **C.2.2      Déclaration de conformité**

Étiquette de conformité à la NMB-003 d'Industrie Canada: *CAN ICES-3 (B)/NMB-3(B)*

## Revision history

**Table 11. Document revision history**

Date	Revision	Changes
12-Jun-2015	1	Initial release.
02-Nov-2015	2	Updated cover page adding mbed-enabled logo. Added: <ul style="list-style-type: none"><li>- <a href="#">Section 1: Features</a></li><li>- <a href="#">Section 2: Demonstration software</a></li><li>- <a href="#">Section 3: Product marking</a></li><li>- <a href="#">Section 4: Ordering information</a></li><li>- <a href="#">Section 5: Technology partners</a></li><li>- <a href="#">Section Appendix C: Federal Communications Commission (FCC) and Industry Canada (IC) Compliance</a></li></ul> Updated <a href="#">Section 8: Electrical schematics</a> figure 19 until the figure 31. Updated <a href="#">Section 6.2: Power supply</a> . Updated <a href="#">Section 6.1.1: Drivers</a> .
